Augmented Reality

The speaker claims, "Augmented reality is an enhanced version of the real physical world that is achieved by different sensory stimuli" [1]. He began explaining the various use cases of augmented reality in the fields of fashion, education, healthcare, etc. For each of these use cases, he illustrated the capabilities of augmented reality by showing various mock-up videos and provided different real-world examples to validate his claims.

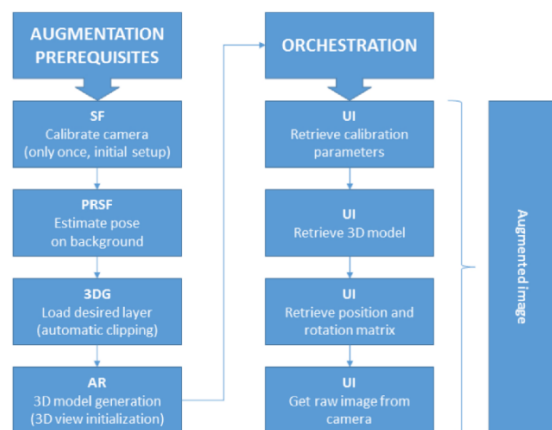

Figure 1: Augmented Reality Geo-visualisation for Underground Utilities [7]

Quantum computing

Talia [2] attempted to explain quantum computers to various age groups. For each age group, Talia began by presenting or asking questions related to topics that were relatable to the specific age group and connected to quantum computing. Once the individuals grasped the context of quantum computing, she delved deeper into the topic.
